

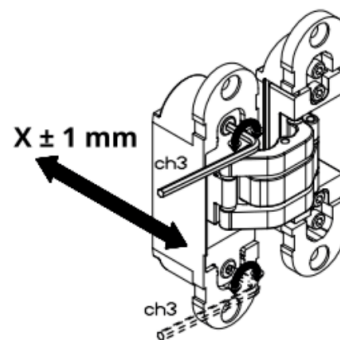

**Figure 1**  
**HEIGHT ADJUSTMENT**

1. Loosen the two screws indicated in fig. 1 on the part of the hinge fixed on the frame using a 3 mm hexagonal wrench.

2. Then, lift the door to the proper position.

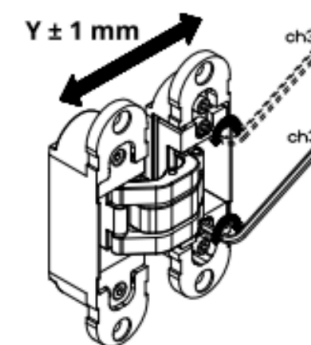

3. The operation can be made easier by inserting the point of a flat screwdriver in the housing of the hinge or by using an Otlav wedge with 5 spacers figure 1.

4. Eventually fasten all the screws (Using a 5-6 Nm strength) starting from the hinge where the screwdriver has in case been used.

**Figure 2**  
**SIDE ADJUSTMENT**

5. The side adjustment is performed on the part of the hinge fixed on the shutter with a 3 mm hexagonal wrench by acting alternately on the two screws indicated in figure 2.

**Figure 3**  
**DEPTH ADJUSTMENT**

6. Loosen the two screws indicated in figure 3 on the part of the hinge fixed on the frame using a 3 mm hexagonal wrench, adjust the shutter in the requested position, then fasten the screws (Using a 5-6 Nm strength).
